Flipbook Lab

Your .pdf becomes a book.

What it is. Flipbook Lab turns a .pdf into a book you can flip through in the browser. You can turn the pages, underline the key sentences, zoom into a detail and record a video to use in your presentations.

Where the file stays. The .pdf is never sent to a server: the pages are prepared in your browser and the last .pdf you opened is remembered only on this computer.

This booklet. You are flipping through the sample .pdf. Each page explains one feature and contains real text, so you can try the tools right away. Change the language at the top right and the booklet changes language with the app.

TRY IT NOW

Drag the bottom right corner of this page to turn it.

01 · OPEN AND FLIP

Flipping

Just like a real book.

Opening a PDF. Press Open PDF at the top or drag the file onto the window, even with a book already open. With the Link button you paste the address of a public .pdf, including Dropbox, Google Drive, OneDrive or GitHub: the app downloads and opens it.

Turning pages. Drag the corner of a page, click the page, or use the arrows at the bottom or on the keyboard. When the mouse gets close to a corner, the page lifts slightly to invite you to turn it.

Book or page. The Book view shows two pages side by side with the cover on its own, like a magazine. The Page view shows one page at a time, larger.

TRY IT NOW

Click the left half of the book to go back.

02 · UNDERLINE

Underlining

The mark finds the line by itself.

Underline and Highlight. Pick one of the two tools on the left and drag over a sentence. The mark snaps to the text like a selection: word by word, even across lines, and it stays in the column where you started.

One click, one word. A single click on a word marks the whole word. It is the quickest way to point out a term during a lecture.

Pen and eraser. The pen is for circling, drawing arrows or writing by hand. The eraser removes a mark with a single touch. Outside the text, for example over a photo, the highlighter goes back to freehand.

TRY IT NOW

Underline this sentence by dragging just below the words.

03 · MARKS

Stay or fade

Two ways of underlining.

Marks that stay. With the pin icon, marks stay on the page even when you turn the page and come back. These are the marks to prepare before an automatic video.

Marks that fade. With the stopwatch icon, each mark stays visible for about three seconds and then disappears by itself. It is perfect while you speak: you point out an idea and the page is clean again.

Colours. You have six colours: yellow, red, blue, green, black and white. The bin clears all the marks on the pages in front of you.

TRY IT NOW

Press M to switch between the two modes.

04 · ZOOM AND BACKGROUND

Zooming in

Take the audience into the detail.

Zoom. With the mouse wheel, or a pinch on the trackpad, you zoom into the point under the pointer. The minus and plus buttons at the bottom do the same; the number in the middle brings everything back to one hundred percent.

Moving around. When you are zoomed in, hold the space bar and drag, or use the Magnifier tool. The zoom is recorded in the video, with the same smooth movement you see on screen.

Background. At the bottom you choose the stage background: transparent, a colour or one of your images. For Keynote use transparent, for PowerPoint the same colour or image as your slide.

TRY IT NOW

Zoom into this page with the wheel and underline a word.

05 · RECORD

Recording live

Just the book, no mouse.

How it works. Press Record, then flip, underline and zoom as you would in front of an audience, and press Stop. The video plays back exactly your gestures, at your pace.

What you see. The video shows only the book: no pointer, no buttons, no windows. Marks that fade appear and disappear exactly as you made them.

After Stop. The export window opens: choose the format and the resolution, and in a few moments the video is ready to download.

TRY IT NOW

Press R to start and stop recording.

06 · AUTO VIDEO

The video makes itself

Steady pages, marks in order.

Pages and timing. Choose from which page to which page, how many seconds to stay on each page and how fast the pages turn. The pages turn by themselves, always with the same movement.

Marks that draw themselves. Prepare the marks that stay first. With the Draw themselves option, they appear in the video one after another in reading order, and after the last one the page holds for the pause you choose.

Closing the book. At the end the book can close on its cover in a single movement, like closing a magazine on the table.

TRY IT NOW

Underline three sentences, then try Auto video from this page.

07 · EXPORT

Keynote and PowerPoint

The right format for each app.

Transparent MOV, for Keynote. The video contains only the book, with no background, in ProRes 4444. Drag it onto your Keynote slide: the book sits on top of your background. These files are large, about twelve megabytes per second in full HD.

MP4 with colour or image, for PowerPoint. PowerPoint doesn't show transparent videos reliably while presenting. So export an MP4 with the same background colour or image as your slide: the result looks transparent.

In PowerPoint. Insert the video from the Insert menu, then in the playback options choose to start it automatically.

TRY IT NOW

Export a short test in 1280 × 720 first.

08 · KEYBOARD

Shortcuts

Faster, without looking for buttons.

← →	Previous and next page	H	Flip
E	Highlight	U	Underline
P	Pen	G	Eraser
Z	Magnifier	M	Marks stay or fade
+ − 0	Zoom in, out, one hundred percent	Space	Hold and drag to move around
R	Record and stop	Esc	Close windows

The ULTRASPEAKER

Enjoy the stage.
